About

Navigating online dessert options can be overwhelming, with unclear ingredients and inconsistent quality creating frustration for many shoppers. Our project aims to simplify this experience by designing a cookie-ordering app that's fun, safe, and tailored to each user's needs.

Problem Statement

01

Today's dessert shoppers face choice overload, unclear ingredient details, and inconsistent quality when ordering cookies online. Many users especially those with allergies or dietary needs struggle to trust what they're buying.

Target Users

02

Busy, urban dessert lovers:

- People with allergies (nuts, dairy, gluten).
- Students/young adults who want quick, fun ordering.
- Parents seeking clear, safe ingredient info.
- Gift-shoppers who want fast and delightful packaging

Project Goal

03

To create a delightful, transparent, and personalized cookie, ordering app that blends playful branding with responsible data use, allergen safety, and an accessible, human-centred design.

Typography

Our typography system combines the elegant, expressive character of Lust Display with the clean, modern readability of Poppins. This pairing ensures a playful yet accessible visual identity, balancing personality in headings with clarity in body text.

Logo Variations

This logo combines a playful cookie icon with a subtle smile curve to express the brand's warm, joyful personality. The soft, rounded typography and chocolate-toned colour palette reinforce a friendly, dessert-centric identity, while the crumbs integrated into the cookie create a sense of movement and delight. Overall, the mark communicates a fun, welcoming cookie experience that feels handmade, happy, and approachable.

Logo Color

These variations present the logo in multiple background treatments and grayscale formats, highlighting its adaptability and strong visual identity across diverse applications.

Overview

A carefully selected suite of tools powers the app's design, development, and interactive features, ensuring a seamless and scalable user experience.

Design and Prototyping 01

Figma:

• Used to build the full design system, including colour tokens, typography scales, icons, and reusable UI components.

• Supports high-fidelity screen designs for the cookie app and kiosk experience, ensuring visual consistency across platforms.

• Enables interactive prototype flows that simulate the real user journey from onboarding to checkout, to validate usability early.

• Provides smooth designer to developer handoff with organized components, annotations, and exportable assets.

Where To Develop? 02

App Development Direction:

• **React Native:** Coding platform for mobile development.

• **Firebase Auth:** Secure login & identity.

• **Firestore Database:** Real-time menu, orders & user preferences.

• **Firebase Storage:** cookie images & kiosk screen assets.

Tools To Use 03

Selected Tools & Features:

• **Kiosk Touch Screen Integration:** Physical ordering interface in stores, running a streamlined version of the app.

• **In-App Digital Wallet & Loyalty Program:** Secure payments, saved cards, points, rewards, and badges.

• **AI-Powered Recommendation System:** Personalized cookie recommendations & trend-based highlights.

Showcase

These screens showcase some of the design system in action from simple UI atoms to fully formed organisms and demonstrating how consistent components create a seamless, intuitive experience. Each prototype highlights accessibility and inclusivity, ensuring every user can engage comfortably and confidently.

Ethical Check

Delightful but responsible design:

No dark patterns: Clear choices and no forced signups.

Transparent AI use: Cookie Quiz explains data logic.

Accessible UI: Contrast-aware pastels and readable type.

Allergy safety: Ingredient warnings and cross-contamination notes.

Child-safe UX: Simple language, no manipulative nudges.

Privacy-first: No data selling or third-party tracking.

Integration

A breakdown of how each system component connects to support a scalable and reliable cookie-ordering experience.

How the Entire System Connects:

• The design system defines colour tokens, typography, icons, and components that translate directly into React Native UI patterns.

• Firebase powers all dynamic content such as cookies, allergens, user data, cart states, and loyalty points ensuring real-time updates.

• The AI recommendation layer personalizes the experience using quiz inputs, browsing behaviour, and seasonal trends.

• The physical kiosk reuses the same design system, creating consistent interaction patterns across mobile and in-store orders.

• All tools from Figma to Firebase will integrate to support a seamless, scalable, and accessible ordering experience.

Dependencies:

• Strong internet connectivity for real-time sync.

• Accurate ingredient + allergen data.

• High-quality product images.

• Sufficient AI training inputs for better personalization.

Risks:

• AI suggestions becoming resource-heavy.

• Loyalty system complexity overwhelming new users.

• Kiosk requiring regular maintenance and updates.

Feasibility Highlights:

• The tech stack is realistic and achievable for an MVP.

• Firebase and React Native provide rapid development and easy iteration.

• Features scale smoothly, AI can start simple and grow richer over time.

• Fully aligned with accessibility, ethical design, and human-centered principles.

How Each Key Technology Fits Together:

• **Kiosk Integration:** Runs a simplified React interface synced with Firestore for live menus, ensuring a smooth mobile and in-store flow.

• **Digital Wallet & Loyalty Program:** Secured by Firebase Authorization and payment gateways, points and rewards update instantly through Firestore.

• **AI Recommendation System:** A lightweight model generates personalized cookie suggestions, trending flavours, and curated lists.

What Evolved

Since the first feasibility test:

- Simplified tech stack (removed 3D/Unity features for realism and scope control).
- Strengthened allergen communication as a core UX priority.
- Created clearer system flow informed by user testing.
- Improved navigation, home clarity, and card hierarchy.
- Shifted from “fun-only” to “fun and responsible” brand tone.

Key Learning: A delightful cookie experience must still be ethical, transparent, and accessible.

EST. 2025

Next Steps:

- Develop MVP screens using React Native.
- Connect Firebase for menu and cart logic.
- Implement Cookie Quiz personalization.
- Conduct moderated usability testing.
- Find Mentor who would guide and help in refining the tech chosen.
- Future additions: rewards system, gifting mode, AR cookie preview, seasonal drops
